

**Burn
through -
say
“bye-bye.”**

When Torchy attempts to burn through elbows during your cable pull, Champ is there to keep your elbows intact and your installations on track. Champion Fiberglass elbows are incredibly resistant to burn through. Got a critical installation? Replace PVC elbows with fiberglass. Want lower-cost and lighter-weight elbows that last? Move aside, PVC-coated and steel elbows. See what fiberglass can do.

When friction kicks in, the heat rises and structural integrity takes a nosedive. Champion Fiberglass' low coefficient of friction keeps elbow failure and unsafe operating conditions at bay, so you get a faster, smoother, safer pull. And Torchy gets his walking papers. That means faster, more efficient installations and budgets that stay out of the red.
